Brief Comment

5G, cell tower transmissions, high-powered Wifi, and other new wireless technologies absolutely need to be tested for safety. In 2017, I developed tachycardia -- heart pounding -- in response to the wifi of my university and when in meetings in which groups of us were using cell phones and wifi laptops. My children also became electrically sensitive to wireless technology, getting headaches, nosebleeds, insomnia, and joint pain. Please, for the sake of public health, ensure that we have strong, non-industry-funded, research before rolling these technologies out further. I am a Harvard-educated professional, author, and mother of two.
